

# TODAY MORE THAN **10%** OF ADULTS IN THE UNITED STATES—OVER **26 MILLION** PEOPLE—**HAVE CHRONIC KIDNEY DISEASE.**

Together with your team you have the opportunity to slow disease progression, improve your teamwork and receive Maintenance of Certification Part IV credit for practice improvement.

### Your practice will focus on one of these evidence based project aims:

- Increasing the percentage of Stage 3 CKD patients with annual microralbuminuria and serum creatinine testing
- Addressing elevated blood pressure
- Recording CKD on the patient's problem list
- Prescribing an ACE/ARB
- Addressing NSAID use with your patients

### We will provide the resources you need for your improvement project and will assist you along the way.

### By committing to improving CKD care processes through this improvement project you will:

1. Convene your practice team and enroll in the improvement project.
2. Review data from a minimum of 25 patients in your practice. You can use either EHR queries, chart pulls or gather data as you treat your patients. Using your patient data you will select the focus of your improvement project— your project aim—you will then explore your current care processes and develop an improvement plan to test in your practice.
3. Your team will improve the delivery of care. Practical tools will allow you to measure and assess the result of your improvement efforts.
4. Upon completion of two improvement cycles you will reflect on the changes implemented so that you can sustain and spread your improvement efforts.

Upon completion of your project you will be awarded 20 credits from your board for meeting the MOC Part IV requirements for Performance in Practice. You and your team will receive CME/CE credit as well as the satisfaction of knowing that you have improved care for your patients.
